Students' Feedback

Even Semester, 2019-20

Foreword

Students' Feedback Analysis on faculty's performance, by nature, is a self assessing mechanism and helps to go for adequate steps for quality improvement so far as course and class room transactions are concerned. Students' feedback whatever done in classroom is unobservable and unquantifiable. Academic excellence of an educational institution is the ultimate goal which is to feed by a number of quality inputs; the important ones are teaching and teacher's quality. A teacher with best academic performance may not be teaching friendly whether it is inside or outside the class room. Without making fruitful classroom transactions, just compulsory completion of workload as per course allocation and attendance in classes as per routine are not but futile exercises. It requires measuring the lacks in one's achievements from student's point of view. With this understanding the IQAC of Bahona College has developed a mechanism of students' feedback analysis as a measure of self-evaluation so as to find the policy path for quality development in academic transaction. A ten-point quality index mechanism has been formulated.

Objectives

1. To make faculty and departmental level assessment of teaching and teachers' quality in the perception of students.
2. To develop a competitive zeal in teaching environment.
3. To trace policy path for quality development and to undertake necessary action there on.

Methods

1. Twenty one indicators are clubbed into ten as follows. For simplification these 21 indicators have been considered separately.

Sl. No	Quality Categories	Quality Indicators	Related questions
1	Clarity in explanation	1.Audibility 2.Intelligibility 3.Note down opportunity 4.Remembrance impact	1. Is the lecture audible? 2. Is the explanation intelligible? 3. Is the explanation facilitated to note down? 4.Is the presentation memorable even after the classes over ?
2	Knowledgeable	5. Subject	5. Is the teacher comprehensive in

		knowledge 6. Specificity 7. Course consistency	explaining the topic allotted to him? 6. Is the teaching course specific? 7. Is the allotted portion of the syllabus completed in a session?
3	Responsibility	8. Completion of syllabus 9. Remedial measure 10. Opportunity to inter-action	8. Is the allotted portion of the syllabus completed in a session? 9. Does the teacher go for remedial measures? 10. Is feedback taken from students in classroom?
4	Cooperation	11. Off class room guidance 12. Material support	11. Does the teacher guide in off classroom activities such as seminar, GD, field study etc? 12. Does the teacher go for material(books,notes etc) support?
5	Punctuality	13. Class regularity 14. Timely result	13. Is the teacher routinely regular in the class? 14. Does the teacher perform evaluation jobs in time (such as notes checking, examining script of class test etc.)?
6	Motivation	15. Inspiration 16. Higher education counseling	15. Do you think the teacher is ideal? 16. Does the teacher motivate or offer counselling for job placement, higher education ,higher ideal life?
7	Friendliness	17. Approachability 18 Response students' query	17. Is the teacher approachable academic need? 18. Does the teacher make you understand on the things better as you ask for?
8	Stability	19. Stability	19. Is the teacher stable in his work and words?
9	Mentorability	20. Mentorability	20. As a mentor is the teacher beneficent for you?
10	Sense of humour	21. Sense of humour	21. Does the teacher take any measure to break class room monotony?

To make the quality differentials observable, they were converted to five grades – (a) A = Very good, (b) B = Good, (c) C = Average, (d) D = Less than average and (e) E = Poor. A questionnaire was so prepared to have in-built descending order of quality parameters. That is, more important quality indicators are placed before the less important ones. To make the grades measurable, they are converted to numbers such as – A = 5, B = 4, C = 3, D = 2 and E = 1. They are termed as Grade Value (GV). Again, to have consistency among the quality parameters, they are weighted down from 21 to 1, total weightage (W)

being 231. Thus Faculty Performance Index (FPI) is estimated for each faculty of the college by using the following formula.

$$FPI = \frac{(AGV \times PW \times Sa) + (AGV \times PW \times Sb) + (AGV \times PW \times Sc) + (AGV \times PW \times Sd) + (AGV \times PW \times Se)}{\text{Maximum } GV \times PW \times St}$$

Here,

- $AGV \Rightarrow$ Actual grade value
- $W \Rightarrow$ Parametric weight
- $Sa \Rightarrow$ Total students no responding grade A
- $Sb \Rightarrow$ Total students no responding grade B
- $Sc \Rightarrow$ Total students no responding grade C
- $Sd \Rightarrow$ Total students no responding grade D
- $Se \Rightarrow$ Total students no responding grade E
- $St \Rightarrow$ Total responding students

Maximum PI is 1 indicating the highest quality performance. The lower is PI value than 1, the lower is quality performance it implies.

FAPI for each faculty can be estimated as follows –

$$FAPI = \frac{\sum_{i=1}^{21} PI_i}{21}$$

Here, FAPI \Rightarrow Faculty average performance index

Thus Departmental average performance index (DAPI) can be estimated as follows :

$$DAPI = \frac{\sum_{i=1}^n FAPI_i}{n}$$

Again indicator wise performance index can be formed as

$$IAPI = \frac{\sum_{i=1}^{12} DAPI_i}{12}$$

Here, IAPI \Rightarrow Indicator wise average performance index

Grading Scale

FAPI/DAPI has been graded as per following scale

$$A = 0.9620 - 0.9073$$

B= 0.9072 - 0.8525

C= 0.8524 - 0.7978

D = Less than 0.7978

Balance in Quality

Balance in quality has been measured by finding rate of change (slope) across quality indicators from 1 to 21. The less is slope, the more is balanced in quality. The direction of the slope also matters. Negative slope implies giving more emphasis on more important indicators and less emphasis on less important indicators. Here lower slope is better than higher slope. But positive slope is unexpected. Positive slope reflects giving much emphasis on less important quality indicators and less emphasis on more important of the same. In both cases, whether positive or negative, lower slope is better.

Above graphs show the slopes of the curve representing quality indicators having down line weightage, which have numerically been estimated as shown in the above table. Overall ranks of the departments have been estimated by considering the ranks of the slope along with DAPI ranks.

Ranks of Departments

The faculties as a whole are most weak in quality serial number 5, 21, 15, 16 and 10. They are respectively subject knowledge, sense of humour, inspiration, higher education counseling and opportunity inter-action. Faculties are most strong in 18, 1, 2, and 7. They are respectively response to students' query, audibility, intelligibility and course consistency.

Conclusions

Tables and graphs shown above are self-explanatory. So, no extra explanation has been added. Faculties and the departments need to go thoroughly to the parts concerned and take corrective measures to mitigate the loopholes as this feedback report reflects. The authority is expected to take necessary measure as a whole so as to enhance the quality effort of the institute.
